

Gum Break chews up and spits out some of the most common problems encountered with adhesive removers.

Noxious fumes? Chew. Spit. Gone.
Nasty resoiling residue that is hard to extract out? Chew. Spit. Gone.
Sticky, gooey gum remnants that won't come out no matter how much chemical you use? Chew. Spit. Gone.

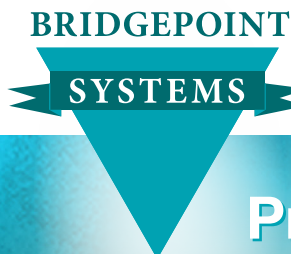

After obtaining extensive feedback from the field and lab, the reports were conclusive. Technicians didn't want nasty fumes that made homeowners question what was being used in their house. They were tired of sticky, oily solutions that were hard to extract out. And, they wanted a gum remover that worked! Gum Break does all that and more by using a special blend of potent surfactants that lubricate the carpet fibers and allows the gum to slide off the carpet fibers. These surfactants easily rinse free from the carpet, leaving a fresh, adhesive free carpet that won't become a small dirt magnet in your customer's carpet.

- Removes gum, glue, tape residue and other adhesives
- VOC compliant adhesive remover
- Gelled solution helps prevent delamination
- No noxious odors

DIRECTIONS:

1. Remove loose or excess residue.
2. Apply Gum Break full strength to the adhesive or gum. Avoid over-application.
3. Agitate Gum Break into area with any hand held implements like GUM-GETTER or bone scraper. Poke into the contaminant surface to allow the Gum Break to penetrate.
4. Allow to dwell for 3-5 minutes.
5. Blot or scrape up excess Gum Break along with any adhesive or gum that has been loosened. Repeat steps 2-5 if necessary.
6. Blot and rinse the area thoroughly, using extraction equipment and clean water.
7. Mist Spot Stop on treated areas. Brush Spot Stop to both align the fibers and evenly distribute the product.

Available in Quarts and 12 x 1 Quart cases

Part # CS36QT
