

ALKALINE PRESPRAY

#2661-3404

ALKALINE PRESBRAY

Alkaline Pre-spray is designed to be used regularly for traffic lane preconditioning. Dilute it to proper strength, spray it on the carpet and watch the soil and stains begin to melt away. Alkaline Pre-spray begins immediately to separate soil and grease from the carpet fibers. While maintaining a safer pH designed for nylon, Alkaline Pre-spray will readily remove soils like no other traffic lane cleaner in its class. Safer and effective for stain resistant carpets.

- Breaks down and dissolves stubborn oil and grease.
- It has a stable pH which enables the formula to maintain an optimum pH of 9.5 when used at recommended levels of dilution.
- Works fast as it separates particulate soiling from fiber for easier extraction.
- Free rinsing formula by readily removing soils and chemical residues from carpet.
- Pleasant lemon lime fragrance.

DIRECTIONS:

To be used as a traffic lane pre-spray for soiled carpets of all types. Always pretest for colorfastness in an inconspicuous area. Product should be extracted after use. Alkaline Pre-spray is designed for use on nylon carpets and with various types of pump or electric sprayers.

Vacuum thoroughly before cleaning. The vast majority of soils can be removed by vacuuming.

For use with pump or electric sprayers: Dilute 16 oz. Alkaline Pre-spray to 1 gal. hot water (1:8). For exceptionally heavy soil, dilute 32oz. per gal. (1:4). Spray traffic lanes and spotted areas until damp. Extract with your normal process.

The carpets will generally dry overnight. Use of fans will speed up drying.
