## HIGH ALKALINE PRESPRAY

High Alkaline Prespray is the ultimate choice for all olefin, triexta and polyester carpets. An advanced blend of surfactants and alkalinity dissolves the toughest oily soils. It is powerful enough for greasy cafeterias and highly soiled commercial common areas.

- Dissolves bonded oily film on olefin, triexta and polyester carpet that other cleaners miss.
- Works fast as heavy soils are separated from the fibers and ready to extract in minutes.
- Special charged ingredient draws and potassium phosphate holds particulate soil in solution until extracted.
- The draw and hold principle enables free-rinsing for a more thorough cleaning.
- Blends of surfactants and alkaline builders eliminates the need for solvents in the formula reducing airborne VOC and makes product safer than other high alkaline products.

### DIRECTIONS:

To be used as a traffic lane pre-spray for heavily soiled carpets. Always pretest for colorfastness in an inconspicuous area. Product should be extracted after use. High Alkaline Prespray is designed for use on olefin, polyester and triexta carpets. The product will work with various types of pump or electric sprayers.

Vacuum thoroughly before cleaning. The vast majority of soils can be removed by vacuuming.

For use with pump or electric sprayers: Dilute 4 oz. High Alkaline Prespray Slam to 1 gal. hot water (1:32). For exceptionally heavy soil, dilute 8 oz. per gal. (1:16). Spray traffic lanes and spotted areas until damp. Extract with your normal process.

The carpets will generally dry overnight. Use of fans will speed up drying.
