Dear Dynarex Distributor Partner –

We are extremely proud to present our new Product Catalog – Volume II. There are hundreds of new SKU's that have been added to our line, offering the same superior product quality and competitive pricing structures you appreciate and have come to expect from Dynarex. We encourage you to take some time to review the many new products and additional information being supplied.

Please don't hesitate to contact your Dynarex sales representative or our customer service department regarding any of these new items. As our robust growth continues, an expanded product line is not all that's new at Dynarex!

We are also pleased to announce the addition of two new distribution facilities in Jacksonville, FL and McCarran, NV. This adds wider distribution access to our already existing locations located in Pocahontas, AR; Ada, OH and Orangeburg, NY. These new warehouses have greatly improved our service and inventory capabilities. Our customer service department has also been expanded in order to process your orders, and address your questions or concerns even more efficiently. All of our employees are dedicated to making sure that your orders are placed and picked accurately and shipped promptly each day. As a reminder, orders can be transmitted via phone (845-368-8200), fax (845-368-8201) or emailed to: orders@dynarex.com.

In the past year we have proudly introduced several new marketing initiatives which have been announced through our ongoing email blast communications. All new Dynarex marketing materials have a brand-new look and are readily available on our website. In the coming months, Dynarex will bring you a newly enhanced website: www.dynarex.com. This website will enable our distributors the resource tools to access more information faster and easier. Some of these resources will include technical data like MSDS sheets, new marketing materials, advertisements, banner ads, sales support collateral, product images, retail planograms, slide shows & videos along with a host of other highlights!

Dynarex remains committed to the manufacturing of the highest quality medical products in the industry. As always, we are dedicated to providing our support to our many distributors in achieving their sales and marketing objectives.

Dynarex has continued to enjoy steady growth in recent years. This is due, in large part, to our loyal and devoted customers. We understand that we need to earn the confidence of our customers and do not take this support for granted. This is why we will continue to work closely together with you to maintain your trust and business relationship. We thank you in advance for your business and continued support.

Sincerely,

Zalman Tenenbaum
CEO/Dynarex Corporation

Dynarex was established in 1967, and has evolved into one of the healthcare industry's leading manufacturers of disposable medical products. We have thousands of distributor partners in all 50 states, as well as Canada, Europe and South America. Our manufacturing facilities are found in the US and all over the world. Dynarex has four regional warehouses located in Orangeburg, NY; Pocahontas, AR; Ada, OH; Jacksonville, FL and our newest facility in McCarran, NV. These locations combined, offer over 500,000 sq. ft. of space dedicated to shipping and warehousing. Our products encompass such categories as: Wound Care, Antiseptic Products, Personal Protection, Incontinence Products, Patient Care, Instrument Care, Diagnostics, Wetpack Products, Ointments & Creams, Gloves, Urologicals, Respiratory, First Aid, EMS and more!

Back in 2003, Dynarex Corporation acquired select assets from Tillotson Healthcare, a leader in innovative hand covering solutions and owner of proprietary patents to produce several of the most unique gloves in the industry. For over 40 years, Tillotson has been manufacturing a full line of examination,

surgical, and industrial grade gloves, including latex, low-protein latex, soft nitrile and stretch vinyl. Dynarex continues to develop new Dynarex and Tillotson branded gloves for many industries.

Dynarex maintains a modern, state-of-the-art warehouse and headquarters in Orangeburg, NY. We have a dedicated staff devoted to the goal of providing unmatched customer service to our customers. At Dynarex, we ensure that your orders are shipped accurately and on time. The majority of our orders are shipped within 24 hours of receipt. Our experienced and friendly customer service staff is always ready to assist you.

We continue to increase our new product development and production in all these product categories and expect many more in the coming year. Dynarex looks to the future; our commitment to our customers is consistent: to provide a wide range of the finest quality disposable medical products, at an exceptional value, all under one roof to ultimately increase your profits.

- Economical and environmentally friendly
- Soft packs offer easy to use peel open closure as well as snap closure to prevent wipes drying out after opening

Flush Away Flushable Wipes

Safe, Clean & Disposable Wipes. Dynarex introduces a breakthrough in a new premoistened wipe that is flushable and dispersible. Dynarex uses advanced technology unlike regular wipes which are only flushable because they are small enough to leave the bowl. What makes our product unique is its dispersibility: it easily breaks down back to fibers as it goes through the pipes. As an additional advantage, our product has cellulose fibers and is biodegradable.

- *Safe to flush*
- *Convenient to use*
- *Safe for use on patients' skin*
- *pH balanced and alcohol free*
- *Cleans and moisturizes*
- *Soothes with the touch of aloe*

Gloves

TILLOTSON™
HEALTHCARE BRAND

“Your First Choice for Gloves”

State-of-the-Art Facilities Create State-of-the-Art Value. For over 40 years, our Tillotson Healthcare brand has been offering innovative hand covering solutions for the healthcare community – with a full line of examination, surgical and industrial-grade gloves, including latex, low protein latex, nitrile and vinyl. Our low modulus line of gloves (Formula One®, Ultra Care®) remains the benchmark for comfort, fit and tactile sensitivity. In response to the significant issue of latex allergies, these Allotex® enzyme-treated latex gloves reduce allergy causing latex content by as much as 99%. We look forward to providing you with new and exciting hand covering solutions that combine high quality and exceptional value.

At Dynarex, we take our commitment to customer satisfaction very seriously. That’s why we employ the most advanced manufacturing and quality control standards in the medical glove products industry. Our high-speed, computer controlled equipment in our state-of-the-art manufacturing around the world assures products that are of consistently high quality and represent exceptional value.

Patented Technologies and proprietary formulations set the Tillotson Healthcare branded gloves apart from the competition. Whether it’s our low-allergen Allotex® enzyme-treated latex products or True Advantage®, a revolutionary new soft nitrile product with the fit and feel of natural rubber latex – Tillotson remains the leader in innovative hand covering solutions.

Tillotson branded products are created with one goal in mind: to exceed your expectations with a wide range of hand covering products backed by outstanding customer service. No matter which product is right for you, you can expect high quality and value that never vary – product after product, day after day.

Gloves

dynarex[®]

The Tillotson Healthcare brand has remained focused on providing innovative hand covering solutions to the healthcare community.

The Material Choice

A properly balanced glove program should not attempt to pick one glove type for all uses. A glove program should choose an assortment of gloves that most appropriately addresses the varied needs of the end user. The goal is to maximize utility and functionality at the appropriate protection level and at the appropriate cost.

Dynarex recommends that all glove programs should include each of the below material choices as appropriate.

Low Allergen Latex

Allotex[®]

Allotex[®] is enzyme treated latex where the latex proteins are digested and the antigenic protein content of the latex itself is reduced by as much as 99+%. Not reliant on post processing for low allergen levels, Allotex[®] is simply a better latex. Gloves made from Allotex[®] have the same fit, feel, comfort and excellent barrier properties of a conventional latex glove. As shown by the immunologic ELISA Test (ASTM D-6499), products made with Allotex[®] have antigenic protein levels of as much as 99+% less than the same product made with conventional latex.

Use in high risk areas where there exists a potential for contact with bodily fluids. Low allergen latex such as Allotex[®] has superior extended wear barrier properties and is the material of choice in high risk environments

without the fear of sensitization. Low allergen latex should also be used when there is a functional need for increased tactile sensitivity or extended wear durability and comfort.

Nitrile

Use in high risk environments where prolonged exposure to blood, body fluids, cleaning solutions and other chemicals is of concern. Nitrile has a high tensile strength and better chemical resistance than natural rubber latex, especially to hydrocarbonbased solutions and do not contain latex proteins.

What is Nitrile?

Nitrile gloves are made from a synthetic polymer. The nitrile polymer is an elastomer made from 3 monomers. The physical properties (chemical permeation, softness, modulus) of the nitrile are dependent on the formulation of the compound and the relative percentage of the three monomers. There is great variability between different nitrile gloves in fit, feel and comfort.

Vinyl

Use when there is low risk of infectious contact with direct patient care. Vinyl is an excellent choice in the food service, nonpatient housekeeping and maintenance areas.

What is Vinyl?

Poly-vinyl chloride is a plastic. To prevent PVC gloves from being as stiff as PVC pipe, plasticizers are added that soften the film. During extended use, vinyl films can experience reduced barrier effectiveness.

What is Stretch Vinyl?

Gloves are made from a softer resin that produce more flexible gloves without additional plasticizers that might weaken the film. In fact, the specifications for Stretch Vinyl call for higher tensile strength and elongation than standard vinyls. Because of this design, molds can be downsized so that the glove has a more conforming fit, producing better tactile sensitivity than typical vinyl gloves.

What you should know about Tillotson Brand Gloves:

What is Low Modulus?

The property that most impacts the comfort of a glove is its modulus of elasticity or “modulus” for short. Modulus is the resistance of a material to stretch. The higher the modulus, the more force it takes to stretch the glove. “Low modulus” conveys that the glove is easy to stretch and thus puts less stress on the hand while worn, has greater tear and puncture resistance, increased tactile sensitivity and comfortably fits the widest assortment of hand sizes, an important consideration for users who need a skin tight glove fit. ASTM has recognized the Low Modulus Glove as a separate TYPE II Glove category.

What is Low Protein?

Although there is no formal definition of “Low Protein” as recommended by NIOSH in its 1998 Bulletin, common sense says that if a glove tests near or below the practical limit of the test for Protein, it would be “low” compared to gloves that test well above the limit.

For comparison, using the Lowry test, the lower limit is 50 micrograms per gram of glove while gloves can be found that test in excess of 10 times this limit. Using the more recently developed ASTM ELISA Inhibition test that can detect much smaller

amounts of antigenic protein results in the single digits or below should qualify as “low protein”.

What is Powder Free?

To qualify as a powder free glove based on the current ASTM D-3578, a glove must not contain more than 2 milligrams of powder when tested by ASTM D-6124 test for powder. Since all gloves start out as powdered gloves, this test measures the degree of removal of these powders.

What do all the different terms associated with Powder Free gloves mean?

Polymer coated—A synthetic material is applied to the inside of the glove during manufacturing that eliminates or reduces the need for donning powders such as corn starch.

Chlorinated—The use of Chlorine during processing to harden the surface of the glove through oxidation to allow dry hand donning without powders.

Non-chlorinated—The elimination of Chlorine treatment through use of coatings. Non Chlorinated gloves have generally improved shelf life, color and smell.

Powder Free—Meeting the ASTM specification of no more than 2 mg of any filterable residue per glove.

Powderless—Gloves made without the use of donning powder but containing >2 mg of filterable residue per glove. Powderless gloves tend to be easier to double glove than Powder Free gloves.

Siliconized—The use of silicone instead of polymer coating or chlorination to facilitate donning the glove.

What is Non-Chlorinated?

Adding Chlorine to the wash process is an inexpensive means to modify the glove surface to allow easy dry hand donning. However, damp hand donning and extended shelf life storage are poor. The use of polymers to coat the

inside of the glove considerably improves both of these characteristics at the expense of slightly harder dry hand donning.

What is BISOC Chlorination?

Chlorination is the use of Chlorine during the processing to harden the surface of the glove through oxidation to allow dry hand donning without powder. However, when chlorination is applied to the outside surface of the glove, grip characteristics are reduced. The BISOC Process (Bi-Surficial Oriented Chlorination) reduces this problem by using a two stage chlorination process that concentrates the chlorination on the inside of the glove where it is desired.

What is Emollient Enriched Powder?

Glove starch powders are inherently drying to the skin. Their absorptive powers draw out moisture and oils that otherwise help maintain healthy skin. To prevent this, Tillotson blends Selan® hand cream with the starch prior to application. For over 25 years, this method has produced gloves with a silky feel that users prefer over conventional gloves.

What Makes TRUE ADVANTAGE Nitrile Gloves So Comfortable?

True Advantage's unique, patented curing system "connects" the polymer particles during curing at different sites in the polymer backbone than conventional sulfur based cures. These sites allow the polymer more degrees of freedom of movement and thus allow the film to conform to the hand rather than constrict it.

What is Accelerator Free Technology?

Even though nitrile is a synthetic polymer that does not contain latex proteins, it is not necessarily free of allergens. Conventional nitrile gloves require sulfur based vulcanization to develop the necessary physical properties to impart effective barrier properties. As with latex, this requires the use of accelerators like carbamates, thiurams and/or thiazoles in the glove formulation. These materials can cause common Type IV allergic reactions in sensitive users. True Advantage instead uses a patented, non sulfur based curing system that eliminates the need for these accelerators.

What are the causes for Irritation Complaints from glove users?

Reactions to gloves can involve either allergic or nonallergic reactions. Because of the variety and complexity of response to different offending agents, classification of the different sensitivity reactions has been difficult and confusing. Irritant contact dermatitis, the most common, is a reactions that is not caused by an immune response, but by skin cell damage that leads to inflammation. Type IV delayed hypersensitivity, also known as Allergic Contact Dermatitis, usually involves an immune response to a chemical, rather than to protein. It can spread over a wider area than just the site of contact, and it is considered delayed in onset because symptoms can appear several hours after contact. Type I immediate hypersensitivity usually involves an immune response

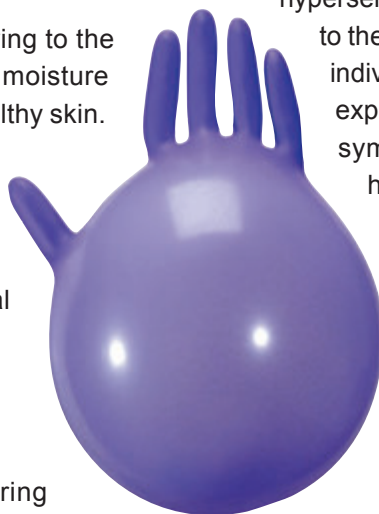

to the protein antigens in natural rubber latex. If an individual becomes Type I sensitized, subsequent exposure can cause an immediate reaction, with symptoms ranging from urticaria (itching and hives), swelling of tissues, wheezing, difficulty breathing, nausea, and in rare instances, anaphylactic shock.

What do I need to know about Latex Protein Levels?

ASTM has set and FDA has proposed a maximum of 200 µg/g (µg/dm²) for any glove. FDA has allowed a level of 50 µg/g (µg/dm²) as a lower limit on claims using the Lowry test. Recently, ASTM has proposed a limit of 10 µg/dm² for Antigenic Protein based on the new ASTM ELISA Test (D-6499-00). While each one of these numbers conveys meaningful information, users should be wary of attempting to make judgments based on small differences in values around each of these numbers.

D3578-.01ae2

The most recent revisions to the latex examination glove standards set maximum protein to either 10 µg/dm² by the ELISA test for antigenic protein or 200 µg/dm² by the lowry test for total protein and a maximum powder content of 10 mg/dm² (approximately 80 mg/glove). While not mandatory, this standard sets the mark for quality exam gloves.

Intermittent Catheters – Sterile

Dynarex Intermittent Straight Catheters effectively manage bladder drainage in cases of urinary retention, bladder obstruction, paralysis or loss of sensation caused by spinal cord injury. They are available in male and female styles, and are for single use only. Regular draining of the bladder will protect the patient's kidneys from infection and will lower the risk of distending the bladder.

- *Straight tip*
- *Latex free*
- *Color-coded for size visualization*
- *Medical grade PVC*
- *Offset polished eyelets to maximize urine flow*
- *Individually sealed in easy-open, peel-strip sterile packages*
